Chapter 1: Machine Learning Landscape

1 Types of Machine Learning Systems

Useful to break down ML system types into 3 categories:

- based on supervision (labeling)
 - supervised learning
 - unsupervised learning
 - semisupervised learning
 - reinforcement learning
- based on incremental learning
 - online learning
 - batch learning
- based on learning type
 - instance-based
 - model-based

1.1 Supervised/Unsupervised Learning

Classify according to amount and type of supervision during training.

1.1.1 Supervised Learning

Training data includes the desired solution called **labels**.

```
import numpy as np

def incmatrix(genl1,genl2):
    m = len(genl1)
```

```

n = len(genl2)
M = None #to become the incidence matrix
VT = np.zeros((n*m,1), int) #dummy variable

#compute the bitwise xor matrix
M1 = bitxormatrix(genl1)
M2 = np.triu(bitxormatrix(genl2),1)

for i in range(m-1):
    for j in range(i+1, m):
        [r,c] = np.where(M2 == M1[i,j])
        for k in range(len(r)):
            VT[(i)*n + r[k]] = 1;
            VT[(i)*n + c[k]] = 1;
            VT[(j)*n + r[k]] = 1;
            VT[(j)*n + c[k]] = 1;

        if M is None:
            M = np.copy(VT)
        else:
            M = np.concatenate((M, VT), 1)

        VT = np.zeros((n*m,1), int)

return M

```

```

select *
from employee_info
group by 1,2
having count(1) > 0
;

```
